Comment:

GFR is not calculated for patients under 18 years of age.

Estimated GFR (eGFR) is calculated by the CKD-Epi formula using serum creatinine, sex, age and race. Result is normalized to a standard body surface area (BSA, 1.73m²). This result is invalid if serum creatinine is not in steady state, if patient is receiving dialysis, or if muscle mass is significantly above or below population norm for age and gender.

-GFR Ranges-

GFR >89 Normal (or CKD1*)

Component	Value	Ref Range	Test Method	Analysis Time	Performed At	Pathologist Signature
60-89 Mildly reduced (CKD2*) 30-59 Moderately reduced (CKD3 if >3mos) 15-29 Severely reduced (CKD4 if >3mos) GFR <15 Kidney failure (CKD5 if >3mos) * GFR >60 is not diagnostic of CKD1 or 2 unless another marker of kidney damage is present (e.g. excessive urine albumin or urine protein on 2 occasions, or renal biopsy or imaging abnormality).
